

Cells, whether cancerous or normal can only live and reproduce in a pH range of between 6.5 and 7.5. A healthy cell has a pH of 7.35 while a cancer cell is more acidic. When the pH of a cancer cell goes above 7.5 it dies and if it goes above 8.0 it will die in a matter of hours. Alkaline Water helps restore the delicate pH balance of the body.

Free radicals have been recognized as one of possible causes of cancer. Alkaline Water is rich in antioxidants that help fight free radicals and help flush your body from toxins. Dr. Otto Warburg, a two-time Nobel Prize winner, revealed that the cause of cancer is lack of a sufficient oxygen in the body. Alkaline Water is oxygen rich due to abundance of hydroxide ions and helps feed more oxygen to cells.
